- Detailed in-app grammar reference guide for on the go learners
- Physical grammar reference guide for kinaesthetic learners
- Targeted long term knowledge retention
- Balanced content across a broad range of topics
- Uses real life sentences
- Increased confidence of knowledge (I know what I know)
- Effective learning materials created from *corpora*

Learning Challenge

The ability to use English is a competitive advantage. The progress of each student's experience can vary, as not everyone learns at the same pace, and individuals have different areas of knowledge that they need to focus on as their language skills develop.

The English language is constantly evolving at a rate which publishers cannot keep up with, meaning that your English conversation, comprehension and written skills may not be as current as you need them to be.

Solution Overview

Engramo English is a new application that offers a personalised approach to learning English. Engramo's unique, highly effective, online learning platform is designed to enhance our students' communication and fluency. Our bespoke adaptive learning algorithms tailor the content to each individual's language needs, therefore providing a custom made course for every learner. The student can be confident that they are learning what they need, when they need it.

From the start of the course, our adaptive learning system is working in the background, focusing on where each student has gaps in their knowledge that need improving and generates course content based on this data.

Engramo English focuses the student on the key comprehension skills needed for the modern business world. Bespoke course materials have been created by English language professors, and are constantly revised to ensure that the content is up to date and accurate for the modern use of the language.
